

## Carbon Emissions Document 2011

### **Cutting Carbon emissions:**

- » We have reduced our electricity consumption by installing Solar PV to our building which means we are generating our own electricity from sunlight, reducing our electricity and also selling our excess electricity back to the National Grid.
- » **Use LED lights wherever possible**
- » We are investigating the benefits of smart metering for our business in 2011. Smart metering reduces costs with better controls.
- » We are investigating Building Management Systems for our premises to help keep control of our buildings, which reduces energy spend and meet our legislative requirements, as well as meeting our corporate Social responsibility.
- » Look at purchasing new vehicles with low emissions
- » Monitor and review fuel consumption
- » By all members of staff following and adhering to our sustainability and recycling policies
